SECRETARY SPEAKER SERIES

Natural and Working Lands:
An Underutilized Climate Solution

FEBRUARY 22, 2022 I 12:30-1:45 PM

REGISTER VIA ZOOM

Amidst worsening impacts of climate change, California is doubling down to achieve carbon neutrality and build climate resilience. Unleashing nature-based climate solutions is essential to this effort.

Improving our stewardship of natural and working lands, with an eye toward sequestering carbon and buffering climate impacts, is a cornerstone of this nature-based strategy. These lands, which include our forests, farms, wetlands, community greenspaces and so much more, cover 90 percent of our state and hold tremendous, underutilized potential to combat climate change.

Join us and diverse leaders as we explore how we can improve our land stewardship to make measurable progress combatting the climate crisis.
