The currently existing questions regarding parking in the CEQA Guidelines Questions regarding parking; XV (proposed XVI) TRANSPORTATION/TRAFFIC, a, b, and f should remain in the document because inadequate parking does result in environmental impact on neighborhoods when there is cruising to look for parking because of congestion in traffic and air quality in the area.

Regarding emissions from any project and “thresholds of significance” of impact, it is important that the measures for this be exact measurements and not only performance based standards which would be inexact.

Since CEQA is California’s premier environmental law, it is very important that the revisions prepare public agencies to adequately address all of the issues relating to both the constructed environment and the natural environment.

Thank you for your consideration,

Marian K. Gerecke
