Subject: Comments on CEQA Guidelines amendments

I would like to comment on changes Appendix G section XVI. TRANSPORTATION/TRAFFIC.

I support changes to subsection "a)" that looks at the capacity of the whole transportation system and includes all modes of transit including human powered ones.

I also support changes to subsection "b)" which focuses on conflict with existing congestion management programs.

I suggest that former subsection "f)" which regards inadequate parking capacity be added back with the stipulation that it refer to the parking of bicycles, electric vehicles, disabled placard holders with regular vehicles, and others forms of transit and vehicle users who may need special accommodation.
