

30x30 CALIFORNIA

By Executive Order (**N-82-20**) California committed conserving 30 percent of our lands and coastal waters by 2030 (30x30).

The **Pathways to 30x30** document outlines the state's strategy for meeting the 30x30 goal and three key objectives:

- Protect and restore **biodiversity**
- Expand **access** to nature
- Mitigate and build resilience to **climate change**

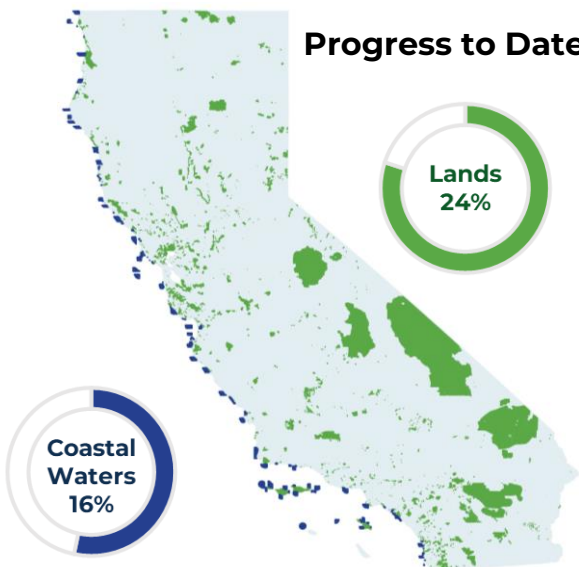

California's 30x30 initiative is committed to:

- Advance **justice equity, diversity, and inclusion**
- Strengthen **tribal partnerships**
- Sustain our **economic prosperity, clean energy resources, and food supply**

30x30 Conservation Areas

Land and coastal water areas that are durably protected and managed to sustain functional ecosystems, both intact and restored, and the diversity of life they support.

Progress to Date

California's strategy to conserve an additional six million acres of land and half a million acres of coastal waters is organized into **10 Pathways**:

1. Accelerate Regionally Led Conservation
2. Execute Strategic Land Acquisitions
3. Increase Voluntary Conservation Easements
4. Enhance Conservation of Existing Public Lands and Coastal Waters
5. Institutionalize Advance Mitigation
6. Expand and Accelerate Environmental Restoration and Stewardship
7. Strengthen Coordination Among Governments
8. Align Investments to Maximize Conservation Benefits
9. Advance and Promote Complementary Conservation Measures
10. Evaluate Conservation Outcomes and Adaptively Manage

The **CA Nature** Geographic Information System is key to advancing California's 30x30 initiative. CA Nature is publicly accessible and brings maps of biodiversity, climate change, and access into one system enabling all Californians to identify 30x30 conservation opportunities.

30x30 Implementation will be led by the California Natural Resources Agency through the **30x30 Partnership**. This collaborative body will serve as an organizing hub for dialogue, shared learning, coordination, and strategic planning.
