State Water Project Asset Management & Oroville Annual Maintenance & Projects

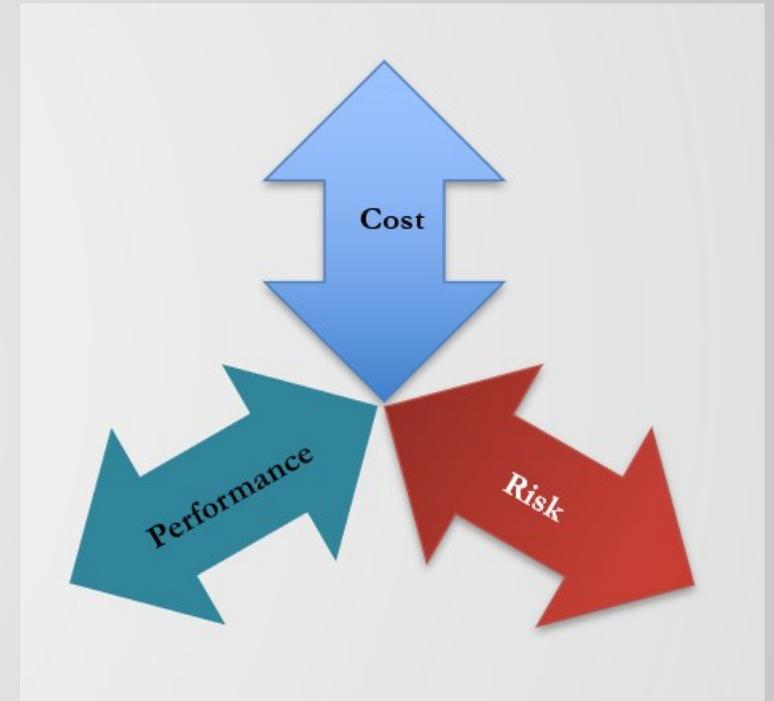

Oroville Citizens Advisory Commission Meeting
August 27, 2021

David Duval, Division Manager
Division of Operations and Maintenance

State Water Project Project Prioritization

- Project Prioritization is one component of DWR's Asset Management (AM) program
 - Builds upon other AM processes
 - Risk identification through inspections, condition assessments, and studies
 - Risk assessment for each proposed project using common matrix
 - Financial management and Resource planning
- Approach considers mandatory requirements, benefits, risk, and resources to find the right balance between performance, cost, and risk

Risk-Informed Prioritization

Why do we use risk to inform prioritization?

- To select a portfolio of projects that reduces the most risk in the least amount of time with the available funding and resources
- Public utilities often use risk, rather than other financial metrics such as (Net Present Value) NPV, to evaluate the priority and urgency of project and other actions
- Risk scoring assigns a quantitative value to the risk associated with an issue or event
- SWP has modeled its process after international standards (ISO 55001)

State Water Project Capital Prioritization Process

Prioritization Output

- Next year's Budget
- Multi-year Capital Plan
