Re: Executive Order N-7-22: Request for Proposed Activities to be Conducted Under Suspension

Dear Secretary Crowfoot,

On behalf of Westlands Water District (“District”), I write to respectfully request that you determine, pursuant to paragraph 5 of Executive Order N-7-22 (March 28, 2022), the activities described below are eligible to be conducted by the District under the suspension of Division 13 (commencing with section 21000) of the Public Resources Code and regulations adopted pursuant to that Division (“CEQA”), and Chapter 3 (commencing with section 85225) of Part 3 of Division 35 of the Water Code and regulations adopted pursuant thereto (“Paragraph 5 Suspension”). The activity described below is similar to the activities previously described to you and for which you determined were eligible to be conducted by the District under the Paragraph 5 Suspension.

As you are aware, the District serves as the Groundwater Sustainability Agency (“GSA”) for the Westside Subbasin of the San Joaquin Valley Groundwater Basin (Subbasin No. 5-22.09) (“Westside Subbasin”), which, on July 19, 2016, the California Department of Water Resources designated as a high-priority basin experiencing critical overdraft. Since adopting the Westside Subbasin Groundwater Sustainability Plan (“GSP”) on January 8, 2020, the District has been taking actions to avoid undesirable results and to support sustainable management of the Westside Subbasin by 2040. On July 19, 2022, the District’s Board of Directors authorized the District to solicit from landowners offers to sell lands overlying the Westside Subbasin to the District. Consistent with its GSP¹ and the objectives of avoiding undesirable results and supporting

¹ Specifically, the acquisition is intended to further the GSP, Project and Management Actions, Project No. 4. As explained in the GSP:

sustainable management, today, the District's Board of Directors authorized the District to acquire 84 acres located in Southeast Quarter, West of the San Luis Canal in Section 33, T.16S., R.15E., M.D.B.&M. ("Sino-Matic property"). See attached map. Of the 84 acres of lands that comprise the Sino-Matic property, approximately 61 acres are planted in almond trees, all of which is located in an area the District has identified as "subsidence prone". During periods of reduced surface water supply, the Sino-Matic property has been irrigated with water pumped from the Westside Subbasin. However, a condition precedent to the acquisition of the Sino-Matic property is either: (a) you determining the acquisition is eligible to be conducted under the Paragraph 5 Suspension, or (b) compliance with CEQA.

Upon acquisition, if that were to occur, the District intends to permanently fallow the Sino-Matic property. Consistent with its prior acquisition of lands in the District, as long as the lands are owned by District, the lands would not be irrigated, and, if the lands are subsequently sold, the District would: (1) impose a non-irrigation covenant, and (2) sever from the lands the right to an allocation of District water supplies and overlying groundwater rights. The District does not presently have any plan to resell the Sino-Matic property. Consistent with that intent, subject in part to your determination that the activities described in this letter are eligible to proceed under paragraph 5 of Executive Order N-7-22, the authorization and direction provided by the District's Board of Directors is to acquire the lands:

1. Including: (a) the right to apply for and receive an allocation of Central Valley Project surface water from the District, and (b) the overlying right to pump groundwater, and
2. To remove the almond trees and permanently fallow all of the lands.

The action authorized by the Board of Directors was approved specifically to reduce demands for surface and groundwater, and thus supporting efficient use of water, preserving water supplies, and addressing impacts of drought. Without the Paragraph 5 Suspension, the District would have to ensure CEQA compliance (estimated at a minimum of 6 months) prior to deciding whether to acquire the Sino-Matic Property. A determination that the acquisition falls within the Paragraph 5 Suspension would facilitate the District's acquisition of the Sino-Matic Property before significant amounts of water are used for irrigation. It is for these reasons the District respectively requests

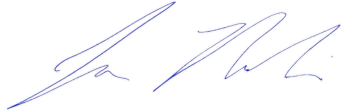

Land subsidence near Checks 16, 17 and 20 of the San Luis Canal/California Aqueduct during the 2013-2016 drought highlighted the necessity to develop a mechanism for the GSA to reduce groundwater pumping to avoid or mitigate undesirable results. With respect to the San Luis Canal at Checks 16, 17, and 20, any amount of additional land subsidence, according to DWR operations staff (DWR personal communication, 2018), will significantly and adversely impact the ability for the USBR and DWR to convey water without implementing new design and construction measures to mitigate the impacts to aqueduct operations from subsidence. Accordingly, the GSA has developed a process to require groundwater pumping reductions in portions of the Subbasin and when necessary to immediately and directly relieve the groundwater pumping stress when continued pumping would produce significant undesirable results.

GSP, at p. 4-23. The Sino-Matic property is near Checks 16 and 17.

that you determine the acquisition of the Sino-Matic Property is eligible to be conducted under the Paragraph 5 Suspension.

Thank you for your consideration of this request.

Sincerely,

A handwritten signature in blue ink, appearing to read "Jon D. Rubin". The signature is fluid and cursive, with a prominent initial "J" and "R".
