

SECRETARY CROWFOOT SPEAKER SERIES EVENT

STEWARDING THE SIERRA NEVADA AMIDST CLIMATE CHANGE

Stretching 400 miles, the Sierra Nevada Region makes up one-quarter of California's land area. It represents California's largest watershed supplying 60 percent of the state's water—the lifeblood of California's economy. The Region is also home to 60 percent of the wildlife diversity in California, stores half of the state's forest carbon, and attracts 50 million visitors each year.

The Sierra Nevada faces environmental, social, and economic challenges from climate change that impact our entire state. Join Secretary Crowfoot, scientists, business experts, and community leaders to discuss how we can protect the well-being of this region and all Californians who depend on its resources.

WEDNESDAY, MARCH 4, 12:30 PM TO 1:30 PM
